Privacy Policy — Action Shot: Motion Photo

Effective date: November 3, 2026
App: Action Shot (`com.dreamteammobile.actionshot`)
Developer: DreamTeam Mobile

Summary

Action Shot has no accounts, no advertising and no tracking. It collects anonymous usage statistics and crash reports, through Google Firebase, to help us find problems and improve the app. **Your videos and pictures never leave your iPhone unless you choose to share them, and they are never part of the statistics or crash reports.**

Handled on your device only

- **Camera** — used only to record the video you want to turn into an action shot. The recording stays on your iPhone.
- **Photo library** — used only to let you pick a video, and to show the most recent videos on the camera screen. The app reads only what you select or what is shown to you, and it does not upload anything.
- **Your videos and pictures** — everything is processed on your iPhone. Finished action shots and the videos they came from are kept in the app's own storage so you can come back to edit them. You can delete any of them from History at any time, and deleting the app removes all of them.
- **Sharing and saving** — a picture leaves the app only when you tap Share or Export and pick where it goes. What happens after that is up to the app or service you choose.

Analytics and crash reports

To see how the app is used and to fix problems, Action Shot uses two Google Firebase services, **Firebase Analytics** and **Firebase Crashlytics**. They are the only data the app sends from your iPhone.

- **Usage statistics (Firebase Analytics)** — which actions are used, for example that a video was recorded or picked, that an action shot was analysed, that a frame was switched on or off

or edited, that a look was applied, that a picture or video was exported or saved to History, and which screens are opened. Some events carry a plain choice or number, such as the look chosen, the number of frames or the length of a recording in seconds. Firebase also records the app version, iOS version, device model, language, and the approximate country or region worked out from the connection (the IP address itself is not kept). It uses a random identifier created for the app on your iPhone, which is not your name, your Apple ID or your advertising identifier.

- **Crash reports (Firebase Crashlytics)** — when the app crashes, a report with technical details of the crash (which part of the app failed, the app and iOS versions, the device model and its state, such as free memory), and the same random identifier.

These services never receive your videos, pictures, photo library, contacts, location or anything you type. The information is not linked to your identity and we do not use it to identify or track you. We do not use it for advertising, and we do not use the advertising identifier (IDFA).

Google processes this information for us under its [Firebase privacy terms](https://firebase.google.com/support/privacy). Firebase keeps usage statistics for a limited time (at most 14 months) and crash reports for 90 days. If you would like us to delete the statistics tied to your device, contact us at the address below (we may ask for the random identifier, which we cannot read from your device ourselves).

What we do not collect

We do not collect your name, email address, contacts, precise location or advertising identifier, and we do not show ads.

Data sharing and sale

We do not sell your data. The anonymous usage statistics and crash reports described above are processed by Google as our service provider; we do not share them with anyone else.

Children

The app is not directed at children under 13. We do not knowingly collect personal information from children.

Changes

We may update this policy from time to time. Changes will be posted on this page with a new effective date.
